

WEST AFRICA'S CIVIL CONSTRUCTION AND MINING SPECIALISTS

SFTP
CIVILS

EVERYTHING CIVIL

We are the specialist civil construction and mining company, building the infrastructure West Africa needs to function more effectively.

Founded in 2002, SFTP Civil is a privately-owned company and a member of Corica. Initially focused on constructing mine infrastructure for major international resource companies, we have since expanded into broader civil construction projects for government, as well as the building and manufacturing sectors.

We pride ourselves on being a one-stop shop, managing every aspect of a project in-house, from materials production to quality testing. This integrated approach ensures better management of our costs, quality, and safety standards. In addition, we ensure the people working on projects have the skills and capacity to get the job done properly.

Civil engineering and construction services driving infrastructure development across Africa. We deliver robust, high-quality solutions tailored to meet the diverse needs of small- to large-scale projects, ensuring sustainable and enduring infrastructure.

Bulk Earthworks

Laying the foundation for large-scale mining and construction projects, our bulk earthworks services include everything from site clearance and excavation to precise grading. We bring decades of experience and a deep understanding of African terrains to deliver earthworks that meet the most stringent standards.

Site Preparation

Preparing your site is a critical first step in any project. Our site preparation services encompass land clearing, leveling, grading, and the installation of essential infrastructure such as drainage systems. We ensure your site is ready for development, providing a stable foundation that supports long-term success.

Road, Bridge, Rail, and Dam Construction

Building infrastructure is key to successful mining operations. We specialize in constructing roads, bridges, rail systems, and dams that are built to last. Our engineering teams apply global standards, ensuring durability, safety, and efficiency across all projects.

Tailings Storage Facility (TSF) Construction

Effective management of mining waste is crucial for environmental stewardship and operational safety. Our Tailings Storage Facility (TSF) construction services are designed to align with the Global Industry Standard on Tailings Management (GISTM), ensuring that all structures meet the highest environmental and safety standards. We focus on efficiently raising TSF walls as rapidly as possible to provide sufficient storage capacity for plant tails, keeping pace with your mine's production plans. This approach ensures that your operation remains compliant, secure, and sustainable throughout the mining lifecycle.

Supply of Aggregate and Concrete

Supplying high-quality materials is fundamental to the success of any construction project. We provide a wide range of aggregates and concrete products tailored to your needs, whether for structural foundations, infrastructure projects, or road construction. Our reliable supply chain ensures timely delivery and compliance with industry standards.

Additionally, SFTP Civils can also support the following:

- **Pavements and coverings**
- **Condominiums**
- **Construction and upgrade of airstrips**
- **Land and foundation preparation for civil structures**
- **Construction of wastewater dams and reservoirs**
- **Heavy concrete works and railway constructions**
- **Equipment rental**
- **Fuel and energy distribution**

SFTP has played a significant role in the development of major mining and civil construction operations throughout West Africa, contributing substantially to the region. Our success is attributed to our strong client relationships, a focus on quality, and our commitment to local employment and training. With a strong presence in Mali, Ivory Coast, Burkina Faso and Senegal, we have connected our local communities and enabled West Africa to function effectively.
